

ROHITH

FULL STACK WEB DEVELOPER

PROFILE

Searching for an opportunity to maximize my skills as a FULL-STACK WEB DEVELOPMENT with well-organized and growing company. Keep adding more knowledge, values to myself and progress professionally by fulfilling new challenges.

PROJECTS

PORTFOLIO

<https://rohith198-cmd.github.io/Personal-Portfolio/>

Developed a fully responsive and interactive personal portfolio website to showcase skills, projects, and experience. The portfolio includes sections for an about me, contact information, and various projects with interactive elements. It demonstrates proficiency in front-end web development, including layout design, animations, and dynamic content manipulation using JavaScript.

INVENTORY MANAGEMENT SYSTEM

Developed an Inventory Management System using React.js for frontend and Node.js/Express for the backend, integrating seamless CRUD operations for managing inventory data. The application utilizes axios for making API calls to the backend, allowing for real-time data interaction.

Implemented React Router for smooth client-side navigation between different views, and employed React Context API for global state management, ensuring consistent dataflow throughout the application.

On the backend, designed and implemented a RESTful API to handle inventory-related requests, including adding, updating, and deleting items. The system is connected to a database MySQL to store and manage inventory data persistently.

This project showcases my ability to build a full-stack application, handling both frontend and backend development, and providing a robust, efficient solution for inventory tracking and management.

Technologies Used : React, Express.js, MySQL, Node.js, Bootstrap

WEATHER APP

Developed a weather forecasting web application that fetches real-time weather data using an external API. The app provides users with current weather conditions, forecasts, and other relevant information based on location input. The project demonstrates proficiency in working with APIs, handling asynchronous operations, and creating user-friendly interfaces.
